Equations and Identities

Art from the Trigonometric Equation

$$\left(\frac{x}{2}\right)\sin\left(\frac{x}{2}\right) + \left(\frac{y}{2}\right)\sin\left(\frac{y}{2}\right) + 8\sin x \sin y = 0$$

Lesson 1

Additional Mathematics A-Level Pure Mathematics : Year 1 Trigonometry IV

1.1 Graph Assisted Equation Solving

To solve equations that involve $\sin$, $\cos$ and $\tan$ a calculator and, from memory, a sketch of the appropriate graph is required. Here are the graphs needed "in mind".

Teaching Video : <http://www.NumberWonder.co.uk/v9044/1a.mp4>

← Watch the video which talks through these essential graphs

1.2 Example

The Question : Solve the equation $\cos x = -0.283$ $0^\circ \leq x \leq 360^\circ$

The Solution : It's tempting to start by using your calculator to get that

$$\begin{aligned}x &= \arccos(-0.283) \\&= 106.4^\circ\end{aligned}$$

This is a solution, but it's not ALL of the solutions. Far better to begin by always getting the acute working angle by initially ignoring the minus sign.

Thus; $\cos x = 0.283$

$$x = \arccos 0.283$$

$$x = 73.6^\circ \leftarrow \text{The working (or principle) angle}$$

The solutions sought in the range $0^\circ \leq x \leq 360^\circ$ will be two of

$$x \qquad 180 - x \qquad 180 + x \qquad \text{or} \qquad 360 - x$$

Now sketch the appropriate graph, either for $\sin$, $\cos$ or $\tan$

In this case we want $y = \cos x$

From the sketch graph, solution sought are $180 - 73.6$ and $180 + 73.6$

$$\therefore x = 106.4^\circ, 253.6^\circ$$

1.3 Exercise

*Any solution based entirely on graphical
or numerical methods is not acceptable*

Marks Available : 30

Question 1

- (a) Find both solutions to the equation $\cos x = 0.417$ for $0^\circ \leq x \leq 360^\circ$
Your solution should include a sketch of the graph of $y = \cos x$

[4 marks]

- (b) Find both solutions to the equation $\cos x = -0.728$ for $0^\circ \leq x \leq 360^\circ$

[4 marks]

Question 2

- (i) Sketch the graph of $y = \sin x$ for $0^\circ \leq x \leq 360^\circ$

[2 marks]

- (ii) With the help of your part (i) sketch, find all solutions in the interval $0^\circ \leq x \leq 360^\circ$ of the following equations;

(a) $\sin x = 0.622$

[2 marks]

(b) $\sin x = -0.383$

[2 marks]

(c) $5 \sin x = 3.445$

[2 marks]

Question 3

(i) Sketch the graph of $y = \tan x$ for $0^\circ \leq x \leq 360^\circ$

[2 marks]

(ii) With the help of your part (i) sketch, find all solutions in the interval $0^\circ \leq x \leq 360^\circ$ of the following equations;

(a) $\tan x = 4.718$

[2 marks]

(b) $\tan x = -1.383$

[2 marks]

(c) $11 \tan x = 8$

[2 marks]

Question 4

Additional Mathematics Examination Question from June 2007, Q4 (OCR)

Find all the values of x in the range $0^\circ < x < 360^\circ$ that satisfy

$$\sin x = -4 \cos x$$

Hint : Divide both sides by $\cos x$. It is OK to do this because $\cos x = 0$ is not a solution so we're not dividing by zero. Then use the fact $\frac{\sin x}{\cos x} = \tan x$.
